A Project report on

Campus Selection System

A Dissertation submitted to JNTU Hyderabad in partial fulfillment of the academic requirements for the award of the degree.

Bachelor of Technology

in

Computer Science and Engineering

Submitted by

D.SHIVANJALI
(21H55A0503)

M.NITHESH
(21H55A0512)

P.SWETHA

(21H55A0517)

Under the esteemed guidance of
Ms.B.Anuradha
(Assistant Professor)

Department of Computer Science and Engineering

CMR COLLEGE OF ENGINEERING & TECHNOLOGY
(UGC Autonomous)
*Approved by AICTE *Affiliated to JNTUH *NAAC Accredited with A^+ Grade

KANDLAKOYA, MEDCHAL ROAD, HYDERABAD - 501401.

2020- 2024

CMR COLLEGE OF ENGINEERING & TECHNOLOGY

KANDLAKOYA, MEDCHAL ROAD, HYDERABAD – 501401

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

CERTIFICATE

This is to certify that the Mini Project II report entitled **"Campus Selection System"** being submitted by D.Shivanjali (21H55A0503) , M.Nithesh (21H55A0512), P.Swetha(21H55A0517) in partial fulfillment for the award of **Bachelor of Technology in Computer Science and Engineering** is a record of bonafide work carried out his/her under my guidance and supervision.

The results embodies in this project report have not been submitted to any other University or Institute for the award of any Degree.

Ms.B.Anuradha
Assistant Professor
Dept. of CSE

Dr. Siva Skandha Sanagala
Associate Professor and HOD
Dept. of CSE

ACKNOWLEDGEMENT

With great pleasure we want to take this opportunity to express my heartfelt gratitude to all the people who helped in making this project work a grand success.

We are grateful to **Ms.B.Anuradha,Assistant Professor**, Department of Computer Science and Engineering for her valuable technical suggestions and guidance during the execution of this project work.

We would like to thank **Dr. Siva Skandha Sanagala,** Head of the Department of Computer Science and Engineering, CMR College of Engineering and Technology, who is the major driving forces to complete my project work successfully.

We are very grateful to **Dr. Vijaya Kumar Koppula**, Dean-Academics, CMR College of Engineering and Technology, for his constant support and motivation in carrying out the project work successfully.

We are highly indebted to **Major Dr. V A Narayana,** Principal, CMR College of Engineering and Technology, for giving permission to carry out this project in a successful and fruitful way.

We would like to thank the **Teaching & Non- teaching** staff of Department of Computer Science and Engineering for their co-operation

We express our sincere thanks to **Shri. Ch. Gopal Reddy**, Secretary, CMR Group of Institutions, for his continuous care.

Finally, We extend thanks to our parents who stood behind us at different stages of this Project. We sincerely acknowledge and thank all those who gave support directly and indirectly in completion of this project work.

D.Shivanjali	21H55A0503
M.Nithesh	21H55A0512
P. Swetha	21H55A0517

ABSTRACT

The main objective of placement tracking is to develop software which manages placement activities in college and makes an interactive GUI where TPO can manage details of all students on his console he can send a mails to students informing about placement activities. Although such a project has a very wide scope, this project contains the most important part i.e., displaying the personal and academic information of students and companies. The students and companies are also provided with the facility of editing some fields like username and password. The project also allows a Database Administrator to enter the information of student and company which is then stored in the corresponding tables in the main database. He can also delete the student and company information after placement is over from the main database.

CHAPTER 1
INTRODUCTION

CHAPTER 1
INTRODUCTION

The main objective of placement tracking is to develop software which manages placement activities in college and makes an interactive GUI where TPO can manage details of all students on his console he can send a mails to students informing about placement activities. Although such a project has a very wide scope, this project contains the most important part i.e., displaying the personal and academic information of students and companies. The students and companies are also provided with the facility of editing some fields like username and password. The project also allows a Database Administrator to enter the information of student and company which is then stored in the corresponding tables in the main database. He can also delete the student and company information after placement is over from the main database.

1.1. Problem Statement

This project is aimed at developing an online application for the training and placement department of the college. The system is an online application that can be accessed throughout the organization and outside as well proper login provided. This can be used as an application for the TPO of the college to manage the student information with regards to placement. Student's login should be able to upload their information to a company representatives logging in may also access or search any information put up by students.

1.2. Research Objective

The aim of the proposed system is to develop a system with improved facilities.The proposed system can overcome the limitation of the existing system,such as student's information is maintained in the database,it gives more security to data,reduces paperwork and saves time,reduces the space.Proposed system is cost effective.

CHAPTER 2
BACKGROUND WORK

CHAPTER 2
BACKGROUND WORK

2.1 TRADITIONAL SYSTEM:

2.1.1 INTRODUCTION:

Campus placement usually brings the companies to the campus which is provided by the placement coordinator for the last year students who are going to complete their graduation. Cut-off mark is requested by the company during the beginning of the open application. Usually, companies that approach the campus come in groups of core companies. They provide broadly 3-5 sets of rounds. This is used to analyze the candidate and reduce the number of applicants to that company to ensure they get their ideal candidate. This process is called the screening
process.

These rounds may include:
1.Skill assessment test/Aptitude Test
2.Group discussion.
3.Technical interview
4.HR Interview [5]

These steps are arranged by the placement coordinators. These rounds may vary based on the requirements of the company. As these students are in a hurry to complete their course,they get less chances of companies having vacancies. This limits the companies they try for placement. This also reduces the chance for low- tier companies to offer the job. There is less time for the student as there are immersed in the works in the institution like project, seminar, exams etc., so it becomes very challenging to prepare for recruitment**.**

The aim of the proposed system is to enhance and modernize existing processes by introducing a more efficient and technologically advanced solution. This new system is designed to address various limitations associated with the current system. Here are some key points about the proposed system:

1. Database Management: The proposed system maintains student information in a structured database. This ensures that data is organized and easily accessible when needed. It eliminates the need for manual record-keeping, reducing the chances of data errors and ensuring data integrity.

2. Enhanced Data Security: The proposed system incorporates robust security measures to protect student data. This includes user access controls, encryption, and backup procedures, making it more resilient against data breaches and unauthorized access.

3. Paperwork Reduction: By digitizing student information and related processes, the proposed system significantly reduces the reliance on paper-based documents and forms. This not only saves resources but also contributes to environmental sustainability.

4. Time Efficiency: The system is designed to streamline various administrative tasks, automating processes such as record updates, report generation, and data retrieval. This results in significant time savings for administrators and staff, enabling them to focus on more value-added activities.

5. Space Savings: With the reduction of paper documents and physical storage needs, the proposed system helps save physical space in educational institutions. This can be repurposed for other uses or simply reduce the demand for storage facilities.

6. Cost-Effective: The system is designed to be cost-effective in the long run. While there may be initial implementation costs, the savings achieved through reduced paperwork, time efficiency, and improved resource utilization can lead to a substantial return on investment over time.

2.1.2 PROBLEMS IN EXISTING SYSTEM:

- Cannot Upload and Download the latest updates.
- No use of Web Services and Remoteing.
- Risk of mismanagement and of data when the project is under development.
- Less Security.
- No proper coordination between different Applications and Users.
- Fewer Users - Friendly.

2.1.3 SOLUTION FOR EXISTING SYSTEM:

The development of the new system contains the following activities, which try to automate the entire process keeping in view the database integration approach.

1.User friendliness is provided in the application with various controls.

2.The system makes the overall project management much easier and flexible.

3.Readily upload the latest updates, allowing users to download the alerts by clicking the URL.

4.There is no risk of data mismanagement at any level while the project development is under process.

5.It provides a high level of security with different levels of authentication.

2.1.4 IMPLEMENTATION:

The aim of the proposed system is to develop a system with improved facilities. The proposed system can overcome all the limitations of the existing system such as, Student's information is maintained in the database, It gives more security to data, Ensures data accuracy, Reduces paperwork and saves time, Eligible students get more priority chance, Various companies can access their information etc.

The communication between is one of the key features of this idea. The pre-interaction of students with companies will help them overcome their fear during interviews. Even though competition is present the fear of competition is reduced in a virtual competition. Even though it might take time for all to understand the system and keep up with it. As time passes, users should get a better idea about it and overcome the old tradition. This implementation will be the future of the recruitment system. Practices of such will be more feasible and economical. This system uses python as front end and

SQL as back end. It stores its data in a database and with the scalable property of this will make this system to be implemented on a large scale. The data will be persistent and will help to access them in just a few clicks. The aim of this project is to develop a system with improved facilities. This allows to overcome various limitation in the existing system such as:

1. Student information maintained in the database.
2. It provides more security to the data.
3. Reduce paperwork and save time.
4. Eligible students get more priority.
5. Various companies can access this information.
6. Status of interview details can also be monitored by using the registered ID, including marks when published.
7. Notifications are sent to the student about the company's details.
8. Students get the text message and email to the registered ID and email ID.
9. Vacancy provided the companies can be viewed.
10. Companies can provide details such as salary bond, infrastructure employee, feedback, job position hierarchy etc. can be easily monitored.
11. Star rating for previously visited companies and places are possible.

2.2 ONLINE CAMPUS SELECTION SYSTEM:

2.2.1 INTRODUCTION:

The Online Campus Selection system is a web based application developed in ASP.Net with C# language as front end and as back end we use SQL Server Management Studio 2008 for database.
Project Concept : The system developed for job seeker and recruiter, The system provide intermediate place for job seeker and company. .
Type of Project : Web Site / Web Application
Technology : ASP.Net C# Language as Front End
Database : SQL-Server 2008 as Back End Database Server
What is Campus Selection System?
The Online Campus Selection System developed for HR Department with including automate the functioning of HR Department. This system is helpful for HR Department to make easy student selection process. We can say this system similar to Human Resource Management System.

The online campus selection software work at college or university. The College invited to recruiter/company for register in this system and help to get employee easily as per their qualification and requirements. Other hand college has all the student data submitted in this system so student can get easily job. The system is a mutual place for student and company. The online campus selection system helps student to get job and company to get employee.

We can use Campus Selection system for University and any Companies. It is developed for smooth working of HR Department. Universities and companies can get benefited through this system. This Software is fully integrated with Student and Company Relationship Management and developed in a manner that is easily manageable, time and cost saving that shows relieving one from manual works. Online Campus Selection provides automated technical screening, intellectual evaluation, electronic mail integration to conduct recruitment. This feature's helps in many ways like saving cost, time and paper work, this shows the paperless environment, unlimited Custom and reports.
We have developed campus selection system in ASP.Net with C# language.We use SQL-Server 2008 Database server.

2.2.2 ADVANTAGES IN EXISTING SYSTEM:

1. Saves Time & Efforts
2. Improved Retention Rates
3. Getting New Knowledge & Skills
4. Quick Learners & Multi-tasking candidates
5. Good relationship between Organization & Campus

2.2.3 PROBLEMS IN EXISTING SYSTEM:

1. High Volume of Talent Pool
2. Resumes are the only way to select a candidate
3. Limited Staff & Time
4. Employer Branding to attract the younger generation
5. Outdated recruiting practices

2.3 ONLINE PREDICTION SYSTEM:

2.3.1 INTRODUCTION:

Generally, nowadays every college is conducting a placement drives to provide maximum employment for the students so conducting placement drives is not only necessary we need to make the reach of that drives to students. So, this Campus Recruitment System application provides the solution. Campus Recruitment System is the software aimed at providing a wide range of access to the administrator in managing and monitoring the complaints registered by the customer regarding the problems they face in accessing the connections extended by the Campus Recruitment System. The administrator can even maintain the record of the students in the organization in allocating the tasks of attending to the complaints raised by the students. This network-based application provides the user of the system a consolidated view of the things managed in the software depending on the benefits assigned by the admin accordingly. Student also see their cart and they can send complaints to service provider if they have any problems regarding Job Placement. The system also consists of a company login where various companies visiting the college can view a list of students in that college and also their respective resumes. This software system permits students to check a list of companies who have posted for vacancy. The administrator have all the rights of the system, can moderate and remove any details not related to college placement guidelines. The system handles student as well as company data and efficiently displays all this data to respective sides.

2.3.2 ADVANTAGES IN EXISTING SYSTEM:

1. Saves Time & Efforts
2. Improved Retention Rates
3. Getting New Knowledge & Skills
4. Quick Learners & Multi-tasking candidates
5. Good relationship between Organization & Campus

2.3.3 PROBLEMS IN EXISTING SYSTEM:

- We are not having secured website (HTTPS). Further we can make secured our website so that students can trust on our information that are provided by our website to get recruited.
- In coming time, we could have the Shortl Message Service facility for the workers and employee search engine which could provide the result on the basis of different procedure to search. We can have an other module of execute the project on website.
- Company see the resume of student and select student for the interview according to profile of the company.

System specifications

HARDWARE REQUIREMENTS

The hardware requirement specifies each interface of the software elements and the hardware elements of the system. These hardware requirements include configuration characteristics.

Processor	**:**	Pentium-IV
Monitor	**:**	SVGA Color monitor
Ram	**:**	1GB
Hard disk	**:**	40GB

SOFTWARE REQUIREMENTS

The software requirements specify the use of all required software products like data management system. The required software product specifies the numbers and version. Each interface specifies the purpose of the interfacing software as related to this software product**.**

Technology	**:**	Java 2 Standard Edition, JDBC
Web Server	**:**	Tomcat 7.0
Client Side Technologies	**:**	HTML, CSS, JavaScript
Server Side Technologies	**:**	Servlets, JSP
Database Server	**:**	MySQL
Editor	**:**	Eclipse
Operating System	**:**	Microsoft Windows, Linux or Mac any version

ADVANTAGES OF PROPOSED SYSTEM :

- Saves time and efforts.
- Improved retention rates.
- Getting new knowledge and skills.
- Good relationship between organization and campus.
- Reduced communication gap between company,student and incharge.
- Saves paper work.

CHAPTER 3
RESULTS AND DISCUSSION

CHAPTER 3

RESULTS AND DISCUSSION

3.1 Results:

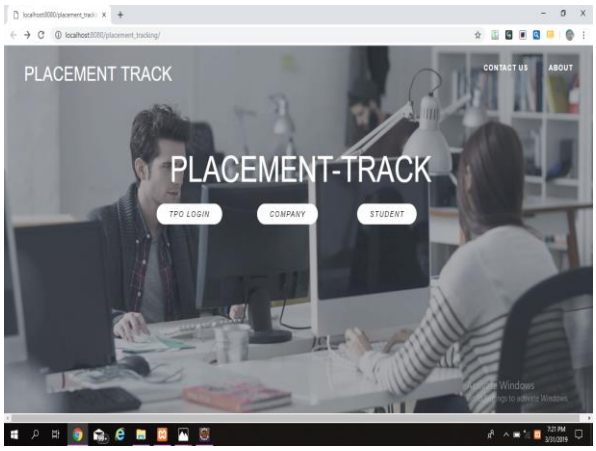
One greater advantage of hosting the web is to make the resource to know all and to become familiar with who provides a way for development of the organization while hosting the software. It should be attractive, user-friendly, and easier to access.

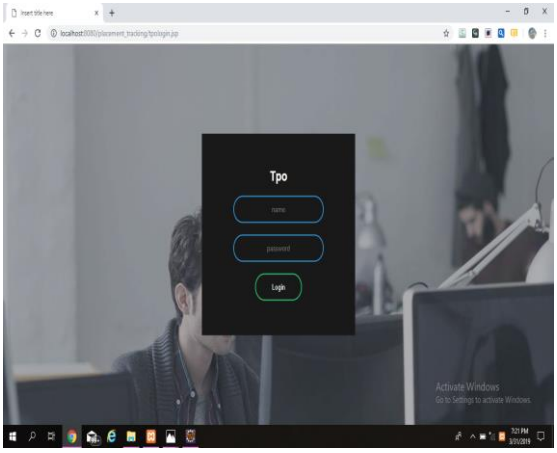
•It reduces manpower to some extent.

•This software constitutes all this characteristics

● It reduces the time and cost.

● It avoids redundancy of data and also system support for taking the floppy backups of the frontend for future enhancements.





CHAPTER 4
CONCLUSION

CHAPTER 4

CONCLUSION

In conclusion, it is evident that creating a user-friendly system to alleviate the challenges faced by college TPOs (Training and Placement Officers) in managing student information is of paramount importance. The current manual methods of managing this data are labor-intensive and prone to errors, necessitating the development of an efficient and effective solution.Throughout the project development, the primary goal has been to minimize both hardware and software requirements, ensuring that the system can cater to a maximum number of users. This approach not only optimizes accessibility but also enhances the ease of use for all stakeholders involved in the placement process.The system facilitates seamless communication between recruiters, placement officers, students, and companies. Recruiters have the flexibility to access the application at their convenience, enabling efficient interaction with the placement officer. Meanwhile, the placement officer can effectively manage and engage with both students and companies by exchanging messages through the system. This two-way communication channel streamlines the entire placement process, making it more efficient and user-friendly.In essence, this system offers a comprehensive and efficient solution to the challenges faced by TPOs in managing student information. It not only simplifies the process but also promotes effective communication among all stakeholders, ultimately contributing to a more successful and streamlined placement process.
